

Replication files for “Alcohol and Self-Control: A Field Experiment in India” (AER-2017-0458)

This folder contains Stata do-files and datasets to generate the tables and figures from the paper.

The “Data Files” folder contains the Stata datasets

- “Final_alcohol_main data.dta” is the main dataset from the experiment.
- The remaining datasets contain from office and recruitment screening data, as well as data on the prevalence of alcohol consumption.

The “Do Files” folder contains the Stata do-files

- The file “0_Analysis_Master_FINAL.do” is the master do-file that runs all remaining do-files.
- The remaining eight do-files run the different data analyses (sorted by topic). The files should run independently, but the master do-file needs to be run at least once before the other do-files (to set the paths, etc.).

The figures and tables are saved in the “Output” folder.
